Brainstorming & Idea Prioritization Template

Date	30 September 2026
Team ID	3
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Varun A L	AI tool that turns a text prompt into a complete illustrated comic strip	Content generation	1
2	Varun A L	Personalisation inputs: character name, setting, tone and art style	Customisation	1
3	Tarakesh M	Export the finished comic as a printable / shareable PDF	Export & sharing	1
4	Tarakesh M	Keep the same character look across all panels (reference image / LoRA)	Image quality	2
5	Harieharan R	Voice narration and multi-language stories	Accessibility	3
6	Harieharan R	User accounts, saved comic library and public share links	Platform features	4
7	Varnika K	Regenerate a single panel without redoing the whole comic	Editing	2
8	Varnika K	Age-appropriate content filter for children's stories	Safety	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Core AI pipeline: prompt + personalisation -> Gemini outline & story -> Stable Diffusion panels -> PDF export	High	High	1	Yes
2	Consistent characters and single-panel regeneration	Medium	High	2	No (future scope)
3	Voice / multi-language and content-safety filter	Medium	Medium	3	No (future scope)
4	Accounts, comic library and share links	Medium	Low	4	No (future scope)

Decision: Group 1 is selected. It is fully achievable with free-tier APIs and open models, directly serves the problem statement, and delivers the complete story-to-PDF experience in one release.
